

OK Repair - Offline System Flowchart

This document explains how OK Repair app should handle offline mode for both Login and Entry screens.

1) LOGIN SCREEN

- If internet is available: Allow user to login normally.
- If internet is not available: Show "No Internet" message, but keep the login UI visible.
- Once the internet returns, enable 'Retry' or 'Login' again.

2) ENTRY SCREEN

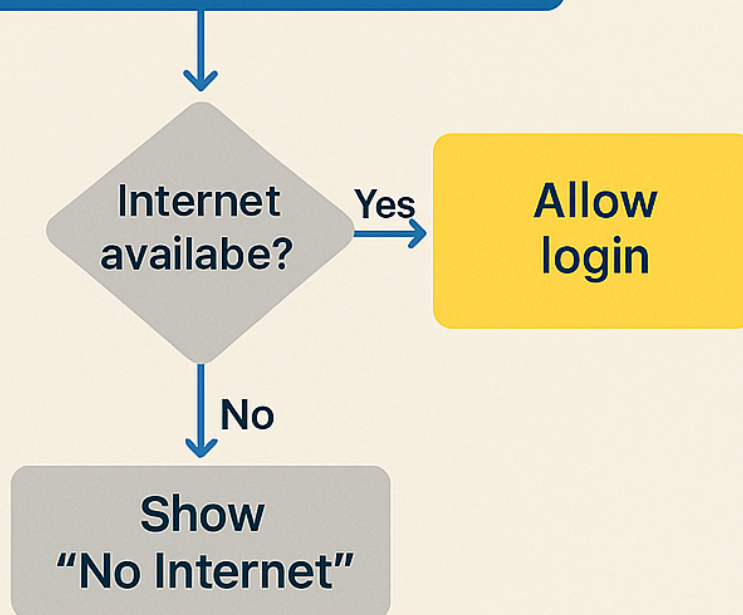

- If internet is not available: Show "No Internet" banner.
- Store entries locally in temporary storage.
- When internet comes back, automatically upload stored entries or allow manual 'Retry'.

3) UI Behavior

- Keep the app interface active; do not block it completely.
- Show lightweight notification/banner for connection issues.

Below is the visual flowchart of this offline system.
